                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /note="vector: pSPORT1; Site_1: Sal1; Site_2: Not1; Total RNAs were extracted from 11.5 dpc embryos (excluding placents and yolk sac). The double-stranded cDNA was synthesized with an oligo (dT)-1 primer GAGAGAGACTARCT and LIGO (dT)-1 primer GAGAGAGACTARCT 3. The cDNAs were ligated to LL-Sal3B: 5' GCTATTGACGTCGACTGACTCC 3' and LL-Sal3B: 5' GCTATTGACGTCGACTCAAT 3'. The cDNAs were size-selected and amplified by long-range PCR using Ex Taq polymerase for 18 cycles. The PCR-amplifiable cDNA mixture went through one round of equalization and was digested with SalI/NotI and cloned into the SalI/NotI sites of the pSPORT1 plasmid vector (Life Technologies). The library was constructed by Dr. Minoru S. H. Ko and Dr. Xiaohong
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ۵

                                                                                                                                                                                                                                                                                                                                                                                                                                                           This pas sequence comprises a human EST-derived sequence designated y170a10 rl. It can be used to identify glial cell derived neurotrophic factor receptor (GDNFR) sequences, including human carlants. Also suitable as probes for GDNFR sequences are another human EST-derived sequence designated ye83h05 rl (see T84978), and fragments of these EST-derived sequences (see T84980-81) or proteins encoded by them. The invention relates to native rat GDNFR alpha (see W27327), its variants and soluble derivatives of (extracellular domain), chimmeric GDNFR alpha and antibodies which bind to the GDNFR alpha, including agonist and neutralising antiolase, as well as various uses for these molecules. It also relates to assay systems for detecting ligands to GDNFR alpha, systems for identifying GDNF-related conditions, methods for the treatment of GDNFR alpha, and claimed methods for the treatment of GDNFR alpha, and claimed conditions, particularly kidney disease associated with glomerulonephritis and enteric nervous system related disorders.
                                                                                                                                                                                                                                                                                                                                                              Matches

CC This DNA sequence comprises a human EST-derived sequence derived sequences, including human come factor receptor (GDNFR) sequences, including human come designated y170alo. If (see T84979), and come fragments of these EST-derived sequences (see T84989-81) or compression of the factor receptor. In particular, it relates to novel use of come fails and its receptor. In particular, it relates to novel use of come fails and its receptor. In particular, it relates to novel use of some fails and to the GDNFR alpha, including agonist and neutralising come fails of the GDNFR alpha, including agonist and neutralising compression of the the GDNFR alpha, including agonist and neutralising compression of the physiological role of GDNFR alpha, including sponist and collective for identifying molecules homologous to GDNFR alpha, alpha, and claimed conditions, particularly kidney disease associated with conditions, particularly kidney disease associated with conditions and knockout animals are also claimed.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                         PT Glial cell line derived neurotrophic factor receptor - useful to pr treat dopaminergic nerve cell disorders, e.g. Parkinson's and Alzheimer's disease
PS Claim 17; Pages 96-98; 196pp; English.
CC The present sequence encodes the rat glial cell line-derived concurred for nerve cell disorders, e.g. Parkinson's and Alzheimer's dopaminergic nerve cell disorders, e.g. Parkinson's and Alzheimer's CC disease or amystrophic lateral sclerosis, complications of diabetes and Huntington's disease and (optionally in combination with GDNF) CC and Huntington's disease and (optionally in combination with GDNF) CC disease or amystrophic lateral sclerosis, complications of diabetes and Huntington's disease and (optionally in combination with GDNF) CC disease or amystrophic lateral sclerosis, complications of diabetes and Huntington's disease and (optionally in cased by injury to combine the seary neurons. The receptor can also be used to block CC unwanted GDNF in pharmaceutical formulations. Receptor expressing CC cells, preferably transfected ex vivo, can be used to dientify by injury to implantation, and the use of the receptor CDNA in gene therapy is called the sease of the conditions and the sease to identify combined to contemplated. Probes based on the CDNA can be used to identify who combined the complex with the condition of GDNF therapy, and abnormalities in receptor can be used to monologous/cross reactive with the cDNA and animal combined to detect GDNF dependent neurons or processes and the antibody combined to detect GDNF dependent neurons or processes and the antibody combined the combined transduction by GDNF, i.e. complex that mediates/enhances signal transduction by GDNF, i.e. complex that mediates and the antibody complex that mediates/enhances signal transduction by GDNF, i.e. complex that mediates and the combined c

                                                               ð
                                                                                                                                                                                                                                                                                                                                                   CC This sequence comprises rat retll cDNA (deposited as ATCC 98047)
CC that codes for the Ret ligand RetLl (see W37457), a key component
CC of the Ret signalling pathway. It consists of the insert of clone
CC #230-5A-86-17 that was isolated from a rat embryonic kidney cDNA
CC expression library using a rat Ret/IgG fusion protein. The
CC isolated cDNA was used as a probe to identify human retLl CDNA
CC (see V00246-47). retL2 and retL3 cDNAs have also been identified
CC (see V00248-51). vectors containing retL1 DNA and prokaryotic or
CC enkaryotic host cells transformed or transfected with these vectors
CC soluble variants and fusion proteins with a toxin, imageable
CC compound or radionuclide. RetL1, optionally when expressed from
CC vectors in vivo, is used to promote growth of new tissue and
CC survival of damaged tissue, particularly kidney or neural tissue.
CC Typical applications are in renal failure, nephritis, kidney
CC confoints, toxic or hypoxic injury, neurodegeneration, motor
CC infections (e.g. meningitis, myelopathy associated with HIV or
CC reutzfeldt-Jakob disease), cranial nerve or spinal cord injury,
CC or conditions involving the peripheral nervous system (Lyme
CC disease, muscular dystrophy and myasthenia gravis). Fusion
CC especially tumours.

PT isolated gilal cell derived neurotrophic factor receptor alpha seful to develop products to diagnose and treat associated disorders, particularly enteric nervous system or kidney disorders products, particularly enteric nervous system or kidney disorders products, particularly enteric nervous system or kidney disorders produced for full-length rat gilal cell derived neurotrophic call factor receptor alpha (GDNFR alpha) (see W27327), a novel creceptor receptor system for GDNF. It was isolated by expression cloning. CC receptor system for GDNF. It was isolated by expression cloning. CC clones were transfected in a cytomegalovirus-based vector. cDNA clones were transfected into COS 7 cells and expression of cultative GDNF receptors was detected by binding of iodinated GDNF. CC a single positive pool was obtained, from which the cDNA clone was collated. An expression vector containing the cDNA clone was collated. An expression vector containing the cDNA clone was collated to native rat GDNF and its receptor. In particular, it crelates to novel uses of GDNF and its receptor. In particular, it crelates to native rat GDNF and its receptor. In particular, it crelates to native rat GDNF and its various uses for these and neutralising antibodies, as well as various uses for these collars. It also relates to assay systems for detecting ligands ct of GDNFR alpha, systems for studying the physiological role of CDNFR, diagnostic techniques for identifying gDNF-related conditions, methods for identifying molecules homologous to GDNFR alpha, and ct therapeutic techniques (claimed) for the treatment of GDNF-related conditions, particularly kidney disease collarined claimed disorders. Transgenic and knockout animals are also crisined.
